

MIP405

PC/104-Plus SBC with up to 400 MHz PowerPC

General Description

The MIP405 is a highly integrated and robust PC/104-Plus Single Board Computer. The board is based around the sophisticated embedded PowerPC 405GPr from IBM. It expands the existing x86 MIP product family. They are available in various options and features. The MIP family can be operated under extreme as well as under normal conditions without the need of fans.

The MIP405 Specialties

are among many others the extreme low power consumption despite the fact having up to 608 DMIPS available. The MIP405 offers industrial features like 4 serial ports, USB, Ethernet, PC/104-Plus (PCI & ISA) soldered SDRAM & Flash and open source boot loader, LINUX & RT OS board support package. Unique features are

Low power, high performance

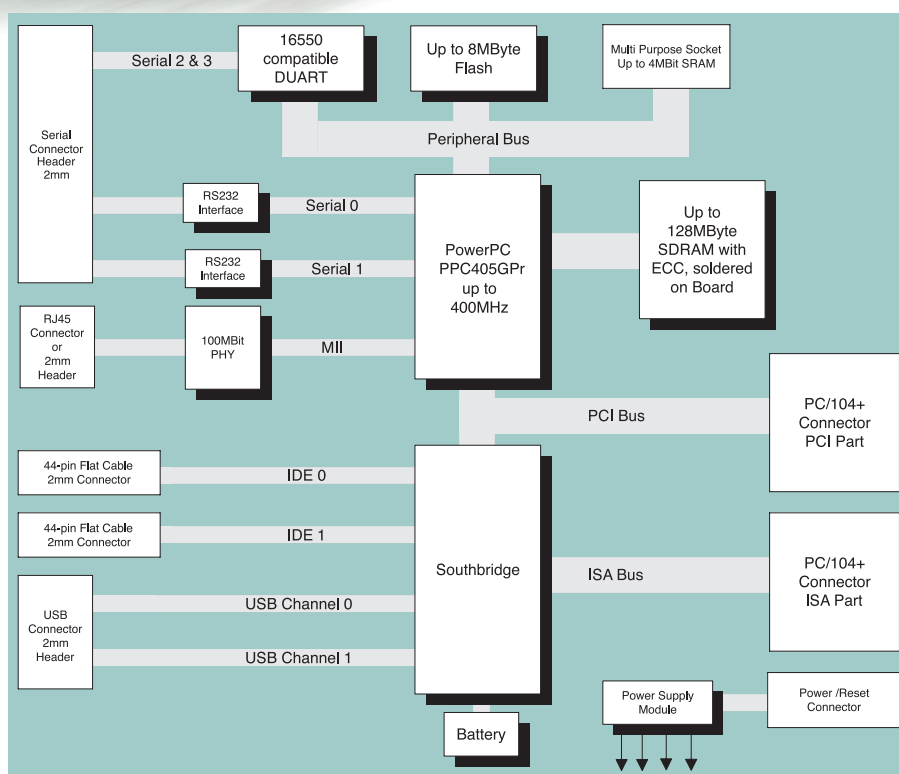

- PC/104-Plus (PCI & ISA)
- Up to 8 MB Flash soldered
- Up to 128 MB SDRAM (ECC)
- Various boot sources
- Multi Purpose Socket for SRAM, EPROM

These features make

the MIP405 to the ideal solution for any application where high quality, small size, ruggedness, high performance, low power or an expandable SBC solution is needed. The products are being used in medical, transportation systems, telecom, airborne systems or any other rugged and/or industrial application.
